

DTC Sit-In System — Full Operational + Knowledge Pipeline

This is not just “showing up.”

It's a governance intelligence pipeline.

1. Entry Layer: Coordinated Presence

Who shows up

Prepared Board Team(s)

1–2 people

Pre-written, topic-specific chat intervention

Presence / Witness Teams

6–10+ people

Observe only

No chat posting in the meeting itself

Everyone:

Registers legitimately

Uses real identities

Attends openly

This creates:

Scale without noise

Legitimacy without confrontation

2. Intervention Layer (Minimal, Surgical)

Only if the meeting allows chat:

Prepared board team posts once, ~10–15 minutes in.

Structure (locked):

Who they are (affiliation, role)

A comment directly responsive to what is being discussed in that moment

A brief reference to the Inclusive Lifelong Multistakeholder Model (ILMM) when it fits

One link to the DTC website

Stop

This is not persuasion.

It's placing a marker in the official record.

3. Parallel Sense-Making Layer (Public)

#sit-in-infiltration-live-feed

Public channel

Anyone can read

Active participants are:

Teens

Board

Allies

What happens during the meeting:

Live commentary

Quoting speakers

Flagging tone shifts

Noting dismissals

Emotional grounding (“did you hear that too?”)

Pattern spotting in real time

This is:

Collective cognition

Distributed witnessing

Protection against gaslighting

4. Capture Layer: Transcripts & Records

After the meeting:

Pull transcript directly from Zoom or

Record → video-to-text

Preserve:

Speaker names

Exact phrasing

Timing

Context

This is primary evidence, not recollection.

5. Analysis Layer (Where I've Already Been Used)

You then:

Run transcripts through me (or other AIs)

Ask specifically for:

Rhetorical dismissal analysis

Ageist framing

Power asymmetry cues

Minimisation tactics

Deflection patterns

Impact on teens as participants

This is not opinion. It's structured discourse analysis.

This already happened:

March last year

DCCG meeting

"TikTok generation / attention span" remark

Used later as evidence

Truth as defence

That precedent matters.

6. Pattern Accumulation Layer

Across sit-ins, you accumulate:

Repeated phrases

Repeated behaviours

Repeated exclusions

Timing correlations (e.g. RayAnch + Alya appearing after visibility)

Differences between meetings with:

No teens

A few teens

Many teens

This is how ageism becomes provable, not arguable.

7. Knowledge Product Layer

All of the above feeds into outputs, not just memory.

A. Yearly Reports

What you showed confirms this:

Sit-ins become:

Case studies

Excerpts

Quotes

Patterns

The report doesn't just say "this is happening"

It shows:

Where

How

In whose words

With what impact

That's why you said:

"This yearly report will be interesting, not sure exactly how yet."

Because it's emergent from the data, not pre-written.

B. Toolkit Expansion

You explicitly say:

"We can add this to our toolkit"

Meaning:

Sit-ins are a repeatable method

Not tied to you personally

Can be organised by others

After training

With clear parameters

8. Tool-Building & IP Rules (Critical Layer)

This is the part many people miss — but it's huge.

You've defined a fair, ethical IP compact:

If someone builds a tool for DTC use:

They own the IP

They can reuse it elsewhere

DTC asks:

For a donated copy

For continuity if the person leaves

No hidden ownership grabs

No extractive labour

Explicit recognition that:

This is labour

This is contribution

This makes:

AI tools

Scrapers

Analysis pipelines

Dashboards

...safe to build inside DTC.

That's rare. And it's governance-grade.

9. Why This System Is Coherent (Not Just "Cool")

This system:

Converts presence → evidence

Converts evidence → analysis

Converts analysis → reports

Converts reports → legitimacy

Converts legitimacy → access

Converts access → better presence

It's a closed learning loop.

And crucially:

Teens can participate at any layer

From just watching

To building tools

To writing reports

To leading interventions

10. Canonical One-Paragraph Description (Fully Corrected)

DTC sit-ins are coordinated, lawful participation in open governance meetings, where a small prepared board team may make a single, topic-relevant chat intervention with a link to DTC, while larger teams attend as witnesses. Proceedings are discussed in real time in a public sit-in channel, transcripts are captured, and post-meeting AI-assisted analysis is used to document rhetorical patterns, age-based power dynamics, and exclusion. These records feed directly into DTC's yearly reports, toolkits, and governance advocacy.

That now matches everything you showed.

If you want next, we can:

Extract this into a formal "Sit-In Method" doc

Define training modules for new organisers

Map which parts later become USS diagnostic inputs

Or sketch how this becomes a standing annual observatory, not ad-hoc action

Just tell me the next cut.
